Desarrollo de una herramienta software para la simulación de sistemas fotovoltaicos con R

Trabajo de Fin de Grado

Francisco Delgado López

Universidad Politécnica de Madrid

Objetivo principal

Desarrollo de un paquete en R

```
library(solaR2)
```

Objetivos secundarios

GNU Emacs

- `Org mode`
- `ESS`

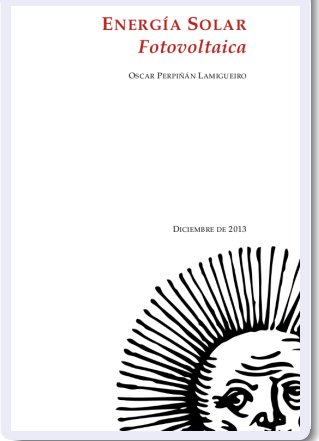
Paquetes de R

- `solaR`
- `zoo`
- `data.table`
- `microbenchmark`
- `profvis`
- `lattice`

LaTeX

- Documento
- Presentación

Energía Solar Fotovoltaica



Soluciones actuales

PVsyst

SISIFO

PVGIS

System Advisor Model

Funcionamiento

- Geometría solar
- Datos meteorológicos
- Radiación en el plano horizontal
- Radiación en el plano del generador
- Simulación de SFCR
- Simulación de SFB
- Optimización de distancias
- Métodos de visualización

Carencias

- Modularidad
- Eficiencia y rendimiento
- Manipulación de datos

solaR2: Radiation and Photovoltaic Systems

Provides tools for calculating solar geometry, solar radiation on horizontal and inclined planes, and simulating the performance of various photovoltaic (PV) systems. Supports daily and intradaily irradiation data, enabling detailed analysis of grid-connected and water-pumping PV systems, including shading effects and solar angle calculations.

Version:	0.10
Depends:	R (≥ 4.0.0), data.table, lattice, latticeExtra
Imports:	RColorBrewer, graphics, grDevices, stats, methods, utils
Suggests:	zoo, sp, raster, rasterVis, tdr, meteoForecast, httr2, jsonlite, testthat (≥ 3.0.0)

solaR2: Solar Radiation and Photovoltaic Systems with R 2

Introduction

The `solaR2` package allows for reproducible research both for photovoltaics (PV) systems performance and solar radiation. It includes a set of classes, methods, and functions to calculate the sun geometry and the solar radiation incident on a photovoltaic generator, as well as to simulate the performance of various photovoltaic energy applications. This package performs the entire calculation procedure from both daily and intradaily global horizontal irradiation to the final productivity of grid-connected PV systems and water pumping PV systems.

It is designed using a set of S4 classes that handle multivariate time series efficiently and are optimized for high-performance data manipulation. The classes share a variety of methods to access the information and several visualization methods. Additionally, the package provides tools for the visual statistical analysis of the performance of large PV plants composed of multiple systems.

Although `solaR2` is primarily designed for time series associated with a location defined by its latitude/longitude values and temperature and irradiation conditions, it can be easily combined with spatial packages for space-time analysis.

Software

The stable version of `solaR2` is hosted at CRAN. The development version is available at GitHub.
